

Glagolica Missal DB

This OpenType font was created by Daniel Bunčić on the basis of [Glagolica Missal DPG](#) by [Nenad Hančić-Matejić](#). It is distributed under the [Creative Commons attribution share-alike license](#) (version 4.0; cc-by-sa).

Glagolica Missal DB differs from Glagolica Missal DPG in several ways:

- The Glagolitic letters are assigned their designated **Unicode** positions (U+2C00 to U+2C5F) rather than the positions for the corresponding Latin or Cyrillic letters (which necessitates the use of a special Glagolitic [keyboard driver](#) like the one offered by Daniel Bunčić but assures the compatibility and readability of a Glagolitic text independently of platform and font availability).
- Ligatures can be accessed via the **OpenType feature “Ligatures”**. (They are additionally placed in the Private Use area, but only as a fall-back option for situations when OpenType features are not available.)
- Glagolica Missal DB contains several **additional ligatures** (which were created on the basis of the list in *Glagoljska početnica* by Frane Paro, Rijeka 1995); however, this task has not been completed yet, so many common ligatures are still missing and will be added in a future version. If you tell me at daniel@buncic.de which ligatures you need, I can quickly create a new version containing them.
- Combining **superscript** versions of the Glagolitic letters were created and placed in the Unicode block “Glagolitic Supplement” (U+1E000 to U+1E02F).
- The Glagolitic letters for *đ, dž, lj, nj* that Frane Paro proposed in his *Glagoljska početnica* for writing Glagolitic texts in modern Croatian orthography are included in the Private Use Area.
- The OpenType feature “Old-style numbers” automatically displays numbers as **Glagolitic numbers** (e.g. if you enter “1483”, you see “𐌶𐌵𐌹𐌶𐌿”).
